

LSMS Research Impact Tracking Pipeline

Automated identification and validation of published research using LSMS survey data

“Who is this?”

Bendegúz (“Ben”) Dörnyei

LSMS Survey Innovation Fellow

World Bank Group, Washington, DC

- From Budapest, Hungary.
- Yale M.P.P., and M.S. in Computer Science at Georgia Tech.
- Dual Yale B.A., with a term at Cambridge along the way.
- Previously UNICEF, the UN, and a few startups.
- Race Canoeing, Travel, Live Music, Low-budget Shows

Objectively measure the impact of LSMS data.

Goal: Find the TOTAL, FLOW and SHARE of papers using our surveys.

Overview

Metrics	TOTAL, FLOW, and SHARE: papers using LSMS data, new papers per World Bank Group fiscal year, and the share with African affiliated authors.
Source	OpenAlex, covering journal articles, working papers, preprints, and grey literature, searched against title, abstract, and full text.
Matching	109 keywords in 10 survey families. Each keyword is assigned one of three tiers according to how ambiguous the term is in isolation.
Decision rule	Two independent axes, identity and use, each scored on a 2 point threshold. A paper is retained only if both axes clear the threshold.
Output	One Excel workbook: discovered papers, analysis with charts, keyword register, search audit trail, and every excluded paper with the reason.
Cost	Approximately \$1.60 per full run. The free OpenAlex tier allows approximately two runs per day.

How the Pipeline Works

Five stages, from a free API key to a validated Excel workbook.

Discovery: Keyword Search (Gate 1)

APPROACH

- 109 keywords across the ten survey families, derived from the team's existing keyword list.
- Recall is prioritized over precision at this stage. Missing a paper here is permanent; an irrelevant match is filtered in Gate 2.
- Each keyword is assigned to one of three tiers by how ambiguous the term is in isolation.

Tier	Terms	Example	Matching rule
A	38	"Uganda National Panel Survey", "LSMS-ISA"	Full-text match accepted without additional context.
B	28	"National Panel Survey", "Living Standards Survey"	Requires an LSMS country term and an allowed subject field.
C	43	"IHPS", "LSMS", "UNPS", "ESS4"	Same gating as Tier B, plus a case-sensitivity check for acronym collisions.

Survey Family	Region	Search Term	Match Tier
LSMS Core Program	Global	Living Standards Measurement Study	A
LSMS Core Program	Global	Living Standards Measurement Survey	A
LSMS Core Program	Global	LSMS-ISA	A
LSMS Core Program	Global	Living Standards Survey	B
LSMS Core Program	Global	LSMS	C

Relevance Scoring: Identity and Use Signals (Gate 2)

IDENTITY SCORE

Is this really one of our surveys, or still a name collision?

Strong (2pts) examples:

- Matched terms from multiple survey families
- Matched two or more survey variants of one survey family
- World Bank affiliated author

Weak (1 pt) examples:

- An LSMS country is named in the title or abstract
- An LSMS country is named around the keyword (full-text)

USE SCORE

Did the authors actually work with the microdata, or do they only mention it?

Strong (2 pt) examples:

- First-person data use language within 40 words of keyword (“we use”, “using data from”, “microdata”)
- Uses microdata URL

Weak (1 p) examples:

- Abstract names the survey AND uses weaker or broader data-source language (“World Bank”)

A paper is retained only if identity and use both reach a threshold of 2 points.

The Product

1. Start

LSMS Impact Measure Analysis

Automated research paper discovery & tracking

OpenAlex API key

Get a free key at openalex.org/settings/api

Run analysis

Takes about 5 minutes • costs roughly \$0.45–\$0.48
(2 runs covered by OpenAlex's free daily budget)

2. Run (~5 min)

LSMS Impact Measure Analysis

Automated research paper discovery & tracking

Running analysis...

Searching OpenAlex and building the workbook. Usually about 5 minutes.

Do not close this window while the analysis is running.

3. Complete

LSMS Impact Measure Analysis

Automated research paper discovery & tracking

Ready

LSMS_papers_20260713_115457.xlsx

Open File

[Run again](#)

Output: one Excel workbook with six sheets, Papers, Analysis, FY Trend, Keywords, Search Log, and Not Relevant (Backup).

Data available for each paper:

- title,
- DOI, and OpenAlex URL,
- authors,
- institutional affiliations,
- publication year/ **WBG FY**,
- dataset country, WBG global region
- research affiliate countries,
- research topic,
- full abstract,
- peer-reviewed / working-paper,
- journal tier,
- survey family,
- keywords that matched,
- match tier (A/B/C) and reason (in abstract, etc.),
- the identity and use scores and the added relevance score

Includes key metrics, such as the TOTAL, FLOW, and SHARE

Product Strengths

MANUAL VALIDATION

52 / 55

papers agree with decision based on
manual, paper-by-paper review

SOURCE

OpenAlex

free, non-profit, open-source, and open-
data

RICH DATA

45

distinct, useful indicators displayed for
each paper

Status and Next Steps

DELIVERED

- TOTAL, FLOW, and SHARE, automated in place of manual tracking
- Easy-to-use interface
- Free to run daily
- Fast (5-10 minutes to run)
- Clear trail of inclusion criteria
- 45 distinct, useful indicators displayed for each paper
- Automatic analysis

KNOWN LIMITATIONS

- Reference-only matches, difficult to exclude precisely
- Full-text source coverage is limited to Open-Source papers (**90.2%** Open Access 7029/7792, in Non-Relevant it's even higher, 94%)

FUTURE POTENTIAL

- Automatic weekly updating website with dashboard
- Further data analysis and graphs based on the 45 indicators
- Increased precision of inclusion-exclusion criteria using LLMs to help decide the corner cases

Thank you!

Output: Key Metrics

“TOTAL” – Total # of publications using LSMS data (FY80-FY26): **7792**

“FLOW” – New papers per FY using LSMS data FY09-FY26

“SHARE” – Share of African research affiliations FY09-FY26

Exclusion Filter (Gate “2+”)

COMMON FALSE POSITIVES

Transitive citation

The paper cites another paper that uses LSMS data, without touching the microdata itself. The survey name enters only through a second order reference.

Survey or meta-analysis inclusion

A broader literature review lists an LSMS-using paper among many others, without analyzing the microdata directly. The review itself is not a data user.

Negative or contrastive mention

The survey is named only to argue against it or contrast with it, for example "despite LSMS efforts." The mention signals awareness, not use.

Unsupported data citation

The paper lists the dataset as a source but shows no evidence of engaging with it, sometimes a sign the citation was generated without ever using the data.
